PROMPT

You are an expert with extensive experience in software engineering ethics within Computer Science. You also have a super knowledge of good development practices and responsible software engineering.

I'm sending you, as input, a class of ethical concerns. This class was categorized with concerns obtained from both industry practitioners (through a questionnaire survey) and papers retrieved in the literature (through a mapping review). This categorization was made using semantic similarity of concerns by humans and LLM.

Based on your expert knowledge, I need your help with the following task: I will send you a paper with ethical label cards. Each label card has some associated values. You should analyse each class of ethical concerns from the input and map this class according the the label card that is affected, as well as each value inside this label card that is also affected by this concern class.

As output, you must deliver an Excel file, using the same columns that you have in the file input (you also can use your expertize to suggest other columns that could be useful). A column that you must have special attention is the "Rationale for mapping". You should draw on your expert knowledge and establishes justification for each mapping. Also, indicate which one is primary or secondary mapping. If you have additional mappings, leave it and we will review if considering it or not.

In addition, for the column "Practical Recommendation / Actions", you should draw on your expert knowledge and established best practices to identify practical measures, recommendations that development teams can adopt to mitigate, or where possible prevent, the potential adverse effects associated with each class of concerns. This also include possible artifacts, phases in the SDLC and roles. For this, remember that you must use only the references consolidated in the list I'm sending you. This will be your truth. You must not consult additional sources. Also, all traceability for the references should be in the worksheet.

Before sending it to me, please verify your answer based on the criteria I explained to you.
